

Started blocking out the case, buttons, the stick, and ball using the primitive shapes. The case was a malformed cube, the buttons were cylinders, and the ball top stick was a cylinder with a ball. The case was modeled using a combination of extrusions and beveling. Additional detail

was added to the case by just using cubes and cylinders. The stick's washer is just the cylinder extruded in a way. Vertexes and faces near the bottom of the ball were removed, and the stick's vertexes were adjusted to the ball. The buttons were also extruded a few times over in a way, and only the outer parts of the button were beveled. Finally, their undersides were deleted, as they're not normally viewable.
