

Used a lot of extrusions and vertex adjusting on the cabinet itself. It is made up of multiple objects to make things easy. Certain parts were beveled. It's mostly been basic modeling. Also straight reused prior modeled assets for "efficiency" (I'm lazy). The six-foot man model helped scale the drink/cup with the cabinet itself. The cabinets themselves are not arranged evenly, mainly because I had the idea to make it seem like they belong in a smaller sized arcade, ran locally. As a result, they're more so strewn about rather than placed precisely to add personality to the environment, though I did make an arrangement with the cabinets in a more unified fashion.
